

ANNUAL REPORT

2019

CORRUPTION PERCEPTION INDEX 2019

The Kyrgyz Republic ranked 125th out of 180 in the 2019 Corruption Perceptions Index (CPI-2019). Kyrgyzstan received 30 points out of 100, being on a par with Djibouti, Ukraine and Azerbaijan. Compared to the results of the Index for 2018, the position of the Kyrgyz Republic has changed very little: it received one point more and changed its position in the ranking (from 135th to 125th place).

The first places in the CPI-2019 were taken by Denmark and New Zealand (87 points), followed by Finland (86 points), the third - shared by Singapore, Sweden and Switzerland (85 points). At the bottom of the rating are Syria (13 points), South Sudan (12 points) and Somalia (9 points).

The Corruption Perception Index is a composite index that measures the perception of corruption in the public sector of various countries. Transparency International has been issuing CPIs annually since 1995. The 2019 Index is based on data from 13 sources over the past two years (2017-2019), compiled by 12 independent organizations in surveys of experts and entrepreneurs around the world. Countries are ranked on a scale of 0 to 100 points. Countries with the highest levels of perceived corruption receive zero points, and 100 - with the lowest. Kyrgyzstan was included in the ranking in 2003.

Corruption Perception Index for 2019 shows that a huge number of countries show little or no improvement in the fight against corruption. Our analysis also shows that cutting big money in politics and making policy decisions broadly aligned with the needs of society are necessary to curb corruption.

This year's CPI study highlights the link between politics, money and corruption. The unregulated flow of big money in politics also makes public policy vulnerable to undue influence. The CPI shows that countries with stricter adherence to campaign finance rules have lower levels of corruption.

KYRGYZSTAN - 2019

Score **30/100** Rank **125/180**

Azerbaijan, Djibouti and Ukraine received the same score

Score for 2018 **29/100**

KYRGYZSTAN'S "NEIGHBORS"

31/100 Bolivia, Gabon, Malawi,

29/100 Guinea, Laos, Maldives, Mali, Mexico, Myanmar, Togo

CORRUPTION PERCEPTIONS INDEX 2019

The perceived levels of public sector corruption in 180 countries/territories around the world.

In countries where campaign finance regulations are comprehensive and systematically enforced, the average CPI score is 70, while in countries where such regulations are either absent or ineffective, the average scores are only 34 and 35, respectively.

Sixty percent of countries that have significantly improved their CPI scores since 2012 have also strengthened adherence to campaign finance rules. In addition, when politicians listen only to wealthy or politically connected people and groups, they often do so to the detriment of the citizens they serve by failing to involve the most important political, social and business actors in the political decision-making process.

Countries with lower CPI scores also have a higher concentration of political power among wealthy citizens. Countries with broader and more open consultation processes scored an average of 61 on the CPI.

In contrast, where there is little consultation, the average score was only 32. Transparency International Chairwoman Delia Ferreira Rubio noted «Governments must urgently eliminate the corrupt role of big money in the financing of political parties and the undue influence it has on our political systems.»

This year, in the Kyrgyzstan will be elected a new Parliament, and we hope that effective laws will be adopted aimed at enhancing the transparency and accountability of the activities of state bodies, as well as the political parties themselves.

PUBLIC PROCUREMENT

Public procurement is the most important instrument of government regulation, which is due to a number of reasons: in the overwhelming majority of countries of the world, public procurement accounts for a significant share of gross domestic product (GDP). In OECD countries this indicator varies within 10-15%, in developing countries this indicator can reach 25%.

Inappropriate use of public funds as a result of corruption and inappropriate practices in the public procurement system is one of the serious problems that are urgent around the world, especially in developing countries such as Kyrgyzstan.

To control corruption in public procurement, it is first necessary to understand procurement procedures and what methods can effectively reduce corruption risks. In addition, it is necessary to analyze the impact of corruption on the public procurement sector, identify indicators that could indicate the existence of corruption schemes, and investigate potential vulnerabilities in the procurement chain.

For public procurement to be effective, it must meet the needs of the relevant actors, i.e. society, government and private sector. Transparency International Kyrgyzstan conducted the study on corruption risks in the public procurement system, where it was identified corruption risks and developed recommendations for improving legislation and the public procurement platform itself. Although the current public procurement system is formally transparent and all

procurement is carried out through an electronic portal, in reality, the operation of the public procurement web portal still leaves loopholes for corruption. Despite the fact that the web portal is considered multifunctional, it is very inconvenient to use (incomplete, freezes, slow loading of the necessary data).

For example, for remote regions due to poor connection, slow internet, etc., this is a big problem. It takes a lot of time to fill out a competitive bid, especially for such tenders in which the procuring entity announces a tender for the purchase of, for example, food products, or services for performing a large amount of work, etc., divides goods or services into separate lots.

For the user, in order to find the tender of interest, it is necessary to know the exact name of the organization or the Tax Identification Number on the public procurement web portal, or the advertisement number. At the same time, if you distract from the work on the web portal, then the page you need will not load, or send you to the main page. The web portal will not display information until you refresh the current page or the web portal itself.

A sophisticated search for information on the web portal of public procurement makes it clear that it was designed in such a way that it can only be used by users who know what to look for and how to find the information they need.

At the same time, if you distract yourself from working on the web portal for literally

10 minutes, then the page you need will not load, or send you to the main page. It turns out that your time spent looking for the necessary tender, or information on the organization, etc., turned out to be wasted. The web portal will not display information until you refresh the page.

Development and launch of the Transparency International Kyrgyzstan web platform with red - flags for monitoring

Based on the identified problems, Transparency International Kyrgyzstan has developed a web platform for monitoring public procurement and developed 25 corruption risks (red flags) - <https://tender.transparency.kg/>. Our website calculates bribery risk scores for each tender. The indicators themselves are not evidence that a tender is prone to corruption, but it does indicate which tenders may require

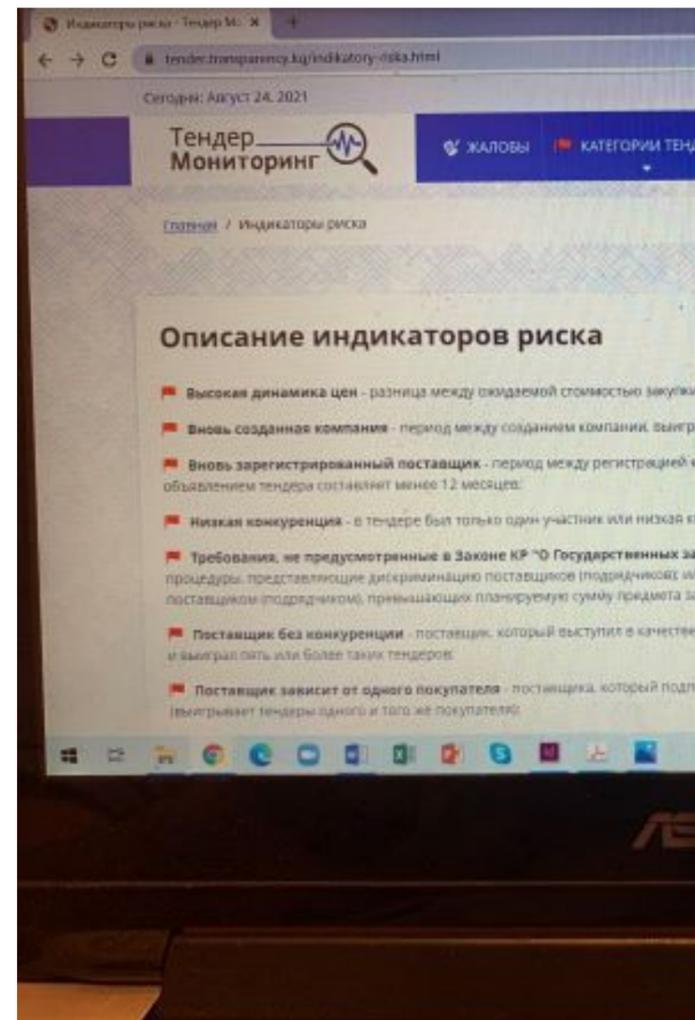

further analysis due to the increased risk of corruption.

Users can view information about procuring entities registered on the Official Public Procurement Portal using the specified ad number, including:

- The total number of published tenders, indicating information about the name, format, method, purchase cost, as well as the results of the ongoing tender; information about the participants in the tender;
- Dates of the published tenders (deadline for submission and validity of bids); information on the planned cost and cost of bids, etc.;
- Display of tenders grouped by categories - goods, works, services and consulting services;
- Name of lots, grouped by the General Classifier of State Purchases;

The tenders stored in the system are checked against several parameters designed to assess the risk of corruption for the respective tender. Users will be able to search using various parameters to view bids at risk of corruption. Below is a description of the parameters. This tool is solely intended to identify tenders that we believe have a higher vulnerability to corruption - this does not necessarily mean that there are any irregularities in the relevant tender. We will continue to refine the criteria for this risk analysis.

The data on this website is taken from the online procurement platform Official Public Procurement Portal of the Kyrgyz Republic. A helper program is linked to the website that automatically downloads and analyzes data and calculates derivative and aggregate statistics that we display. The reprocessed data is then uploaded to the website for public access.

ACCOUNTABLE MINING

In October 2018, Transparency International Kyrgyzstan became one of 5 new chapters joined the Mining for Sustainable Development Programme of Transparency International (TI). The programme is implemented in the frame of a global thematic network initiative led by Transparency International Australia in more than 20 resource-rich countries around the world.

The Mining for Sustainable Development Program complements existing efforts to improve transparency and accountability in the extractive industries by focusing specifically on the start of the mining decision chain: the point at which governments grant and award mining permits and licences, negotiate contracts and make agreements.

The programme is implemented in two phases: the research phase (2018-2020) focuses on understanding the problem by identifying and assessing corruption risks in the process and practice of granting subsoil use licences, permits and contracts. By understanding the nature and causes of corruption risk, national chapter will develop and implement solutions to address priority corruption risks during the advocacy phase of the programme. We will work with key stakeholders from government, the mining industry, civil society and affected communities to improve transparency, accountability and integrity in mining project approval decisions.

The research found that the reforms undertaken by the Kyrgyz government in recent years to address governance risks

in the country's mining sector have yielded some positive results. One of such results was the introduction of a first filed application rule instead of a direct negotiation rule to obtain a license. The adoption of the new Law on Subsoil in 2018 and related by-laws, as well as the clear regulation of the choice of method for granting a licence, depending on the size and importance of the mineral deposit, have contributed to the transparency and integrity of the process. Nevertheless, the study identified 14 risks in the process of granting subsoil use rights. These risks reflect gaps in pre- and post-award disclosure, the appraisal process and public consultation. Most of the risks, however, relate to the context in which mineral rights are awarded, suggesting the need for full-scale reforms to the country's overall governance framework.

Thus, shortcomings in legislation still leave room for ignoring, or sometimes not even including, the requirements of transparency, accountability and integrity in subsoil use licensing and environmental protection. Problems also remain with the implementation in practice of existing legal requirements. For example, compliance with licensing conditions and environmental protection requirements is practically not monitored.

Legislation does not yet contain requirements for the inclusion of anti-corruption provisions in subsoil use agreements and their application in the activities of extractive companies. Reporting of corruption is underdeveloped, even though the Law on the Protection of Whistleblowers of Corruption Offences has

been passed and the legislation enshrines a remuneration for such reporting.

The interests of local communities, in particular rural women, who are amongst the vulnerable groups, are still very poorly taken into account in community consultations due to selective participation of community representatives in such consultations. Both men and women are not sufficiently aware of their rights to participate in such consultations.

The mining industry in the Kyrgyz Republic is an important sector of the economy, currently accounting for about half of industrial production and a tenth of the

country's GDP. This industry is important in the socio-economic development of Kyrgyzstan. The Government is currently developing a Concept for Reforming the Mining Sector, which will be the basis for key changes in this area. The implementation of these changes will require the active participation of all stakeholders, including financial and technical support. The Mining for Sustainable Development Programme contributes to improved governance in the extractive sector in the Kyrgyz Republic by continuing its work to identify risks of corruption in the process of granting subsoil use licenses, permits and contracts.

ANTI-CORRUPTION JOURNAL

The team of Transparency International Kyrgyzstan has developed an «Anti-Corruption Journal» - <https://askjournal.kg/>, in order to inform the population about the public services provided, about overcoming administrative barriers and anti-corruption measures. The task of the

«Anti-Corruption Journal» is not only to explain the laws to the population and help in interaction with government agencies, but also legal education, and the formation of anti-corruption skills among citizens. In order for ordinary citizens to have the opportunity to quickly and efficiently

receive public services, the web - portal has the Instructions section, where people can find several dozen instructions in various areas, such as:

- Army
- State Registration Service
- Land sector
- Healthcare
- Migration
- Taxes
- Local government bodies
- Education
- Law enforcement agencies
- Social services
- Judicial system
- Energy

These instructions provide an accessible and simple description of the sequence of actions when contacting government

agencies. From our instructions, citizens can learn about their rights and obligations of government officials, familiarize themselves with the forms and samples of necessary documents, find out the working hours, addresses and phone numbers of the necessary government organizations. The web- platform has also sections as, Materials, Power, Tools, Analytics, Success Stories, where people can find a lot of interesting and informative information. In addition, the web- platform of the «Anti-Corruption Journal» provides an opportunity to ask questions, exchange opinions and leave your feedback on the quality of public services provided.
